INDICATOR METADATA

Health determinants (The World Bank Data Catalogue)

April 2023

Health determinants (The World Bank Data Catalogue)

About

This dataset is from the [WHO Health Inequality Data Repository](#).

This dataset contains data on health determinants (e.g. education, employment and environment) disaggregated by economic status, place of residence and sex, published in The World Bank Data Catalog.

Data source

Disaggregated data related to education, environment, health, social protection, poverty and social development were sourced from The World Bank Data Catalog (<https://data.worldbank.org/>) using the Indicators API. Data originate from various sources, detailed in the links to indicator metadata.

Methodology

Data in the World Bank Data Catalog originate from various sources, with the definitions, sources and methods available here: <https://databank.worldbank.org/metadataglossary/all/series>

Dataset metadata

Date of first publication	April 2023
Date of updated publication	n/a
Expected frequency of update	Annual
Date of data extraction	2 February 2023
Temporal coverage	1970–2021
Spatial coverage	Global
Spatial granularity	National
Number of countries	192
Number of indicators	64
Number of dimensions of inequality	3

Inequality dimensions

Economic status was determined using a wealth index. Country-specific indices were based on owning selected assets and having access to certain services and constructed using principal component analysis. For wealth quintiles, within each country the index was divided into five equal subgroups that each account for 20% of the population.

Place of residence is based on country-specific criteria for urban and rural.

Sex (male and female).

Disclaimer

The estimates presented may differ from, and should not be regarded as, the official national statistics of individual WHO Member States or official WHO estimates.
